

TERMS AND CONDITIONS FOR ULTRATECH FREEFLOW+

- Proper shuttering / formwork to sustain the concrete pressure.
- Shuttering should be leakproof to avoid any slurry loss, causing honeycombing in the structure.
- Freeflow Plus is a self-compacting concrete, hence it is advisable not to use mechanical vibrators for concreting. However, malleting shall be required.
- Curing should be done as per IS 456-2000, to avoid shrinkage cracks. Concrete surface should not be allowed to dry. Water sprinkling or early curing should be commenced at site or concrete surface shall be protected by covering plastic sheet immediately after placing the concrete.
